PACKAGING

j h print & packaging

ECO - FRIENDLY PACKAGING
breaks down in a manner
which is kinder to the
environment. Investing in
packaging that breaks down
quickly is a cost effective
way to show customers your
commitment to sustainability
& the environment.

Our compostable range includes catering disposals made from renewable, natural & sustainable resources.

WHAT IS BIODEGRADABLE?

Biodegradable refers to the ability of materials to break down and return to nature. In order for packaging products or materials to qualify as biodegradable, they must completely break down and decompose into natural elements within a short time after disposal – typically a year or less.

WHAT IS COMPOSTABLE?

This range consists of catering disposables made from natural, sustainable and renewable resource such as PLA (Polylactic Acid, derived from cornstarch) and moulded fibreboard (made from non-wood fibres such as bagasse (sugar cane fibre) and bamboo).

NATURAL/ RENEWABLE RESOURCES

Raw materials include corn (maize) & bamboo fibre.

PACKAGING RETURNED TO THE GROUND AS COMPOST.

Commercial composting produces compost which can be used as a fertiliser for growing new plants and crops.

Some incinerators burn waste.

SCIENCE & TECHNOLOGY

Natural materials are turned into high quality food service disposables.

ENVIRONMENT

Less fossil fuel is used in production.

DISPOSAL

Disposal options for compostable products include Commercial Composting, incineration (with scope for energy recovery) and Recycling.

CLIMATE

Potential to reduce CO² emissions

WHAT IS RECYCLABLE?

This indicates that an object has been recycled or will be accepted in all recycling collection systems. Sometimes this symbol is used with a percentage figure in the middle to explain the amount of recycled material.

RECYCLING PLASTIC & CARDBOARD

are a large family of materials that are bio-based, compostable, or both.

RENEWABLE RESOURCES

Items recycled cardboard is used to make are things like cereal boxes, tissue paper, printing paper, and poster board.

DID YOU KNOW?

Corrugated cardboard packaging consists nearly of 100% recycled material AND the energy saved from recycling one plastic bottle can power a 100 watt light bulb for almost an hour!

MECHANICAL RECYCLING

By recycling people can prevent millions of tons of material from entering landfills saving space for rubbish that cannot be re-purposed. Landfills not only pollute the environment but also hampers the beauty of the landscape.

REDUCING EMISSIONS

Greatly reduces the amount of energy used daily by not needing to produce new materials. In short, recycling reduces the greenhouse gas emissions into the atmosphere.

ENERGY RECOVERY

The pollutants that are released into the air and water can be greatly reduced with an increase in recycling.
